Findings:

General: Based on observation and interview, the center had bedbugs in classrooms I and J during February 2019 and during the first week of March 2019. The center had janitors to use lice spray to kill the bedbugs in classrooms I and J and to place the children's personal belongings in large, plastic top zip bags during February 2019. The bedbugs were still present at the center and only classrooms I and J were professionally sprayed on 3/8/19. Bedbugs were found on the carpet in classroom N after classrooms I and J were professionally sprayed; therefore, pest control measures were not in place for classroom N.
